GUIDANCE WITH BRICKS

01

The **LEGO® SERIOUS PLAY®** methodology is a facilitated meeting, communication and problem-solving process in which the participants immerse themselves by answering a series of questions, thus probing deeper and deeper into the subject.

Each participant builds her/his own 3D LEGO® model in response to the facilitator's questions using specially selected LEGO® elements.

These 3D models serve as a basis for group discussion, knowledge sharing, problem solving and decision-making.

02

Thanks to an approach based on behavioural, psychological and educational **sciences** as well as the most **innovative guidance methodologies at European level**, an **intensive guidance workshop experience with bricks** has been designed using the LEGO® SERIOUS PLAY® methodology.

Ideal for students, unemployed people, NEET, migrants, workers in transition and young people.

The workshop experience is aimed at providing:

- **Career and vocational guidance**
- **Guidance in choosing a study path**
- **Career transition guidance**

During the workshop, **individual talents** are reflected upon and brought to the surface, the participants are guided towards **awareness** and supported in the process of forging their own career, study and **personal path**.

At the end of the workshop, the participants will be able to draw up their own **guidance action plan** to support their individual path.
